## **Listing of Claims**:

## 1.-33. (Canceled)

- 34. (Previously Presented) A method for quantitating viable cells in a sample, comprising providing a sample containing said cells, contacting said cells with molecule or dye that is detectably altered by enzymatic activity of a viable cell, detecting a total amount of ezymatically altered molecule or dye, and correlating said total amount with a standard value, thereby quantitating viable cells in said sample.
- 35. (Previously Presented) The method of claim 34, wherein said cells are bacteria.
- 36. (Previously Presented) The method of claim 34, wherein said cells are yeast.
- 37. (Previously Presented) The method of claim 34, wherein the enzymatic activity is esterase activity.
- 38. (Previously Presented) The method of claim 34, wherein said enzymatically altered dye or molecule comprises fluorescein diacetate or OREGON GREEN<sup>TM</sup>.
- 39. (Previously Presented) The method of claim 34, wherein detection is performed by a flurorometer.
- 40. (Previously Presented) A kit for quantifying viable yeast or bacteria, comprising a cell suspension solution, a cell penetrating dye, wherein said dye is enzymatically and detactably altered following penetration of viable cells, and instructions for detecting enzymatically altered dye.
